

Cannabis Policy: An International Perspective

**Alison Ritter, Director Drug Policy Modelling
Program**

1st National Cannabis Conference, Powerhouse Museum,
7-8 September 2009

Aims

- Describe international trends in prevalence
- Describe international trends in policy
- Situate Australia within these; and
- Explore the link between policy and cannabis (use, price, arrest)
- Pose some questions...

International cannabis policy

- Marginal to main interests of international drug control (heroin, cocaine, amphetamine)

YET

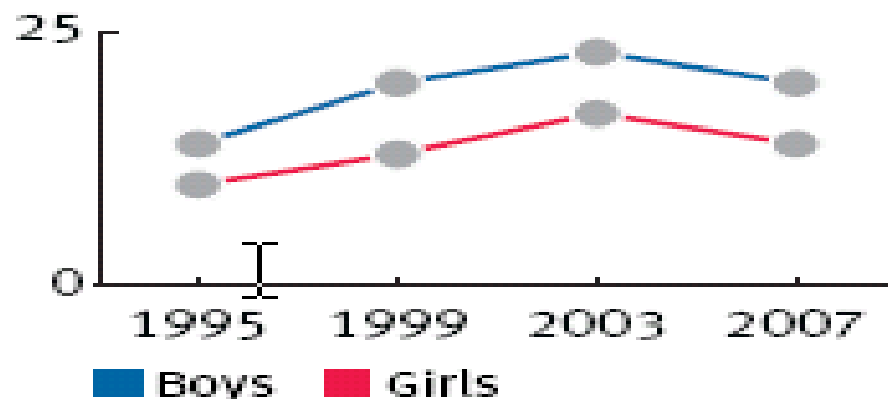

1. Most commonly used illicit drug
 - 160 million people (UNODC, 2005)
2. Represents largest financial component of illicit drug market
 - Cannabis €70 billion p.a.
 - Cocaine €6-9 billion p.a.
 - Heroin €20 billion p.a.

(2005 estimate: "A Report on Global Illicit Drug Markets")
3. Highest rates of arrest (cf other drugs)

International trends in cannabis use

- Mainly declining?
 1. European trends
 2. USA trends
 3. Australian trends

European trends: average across 20 countries

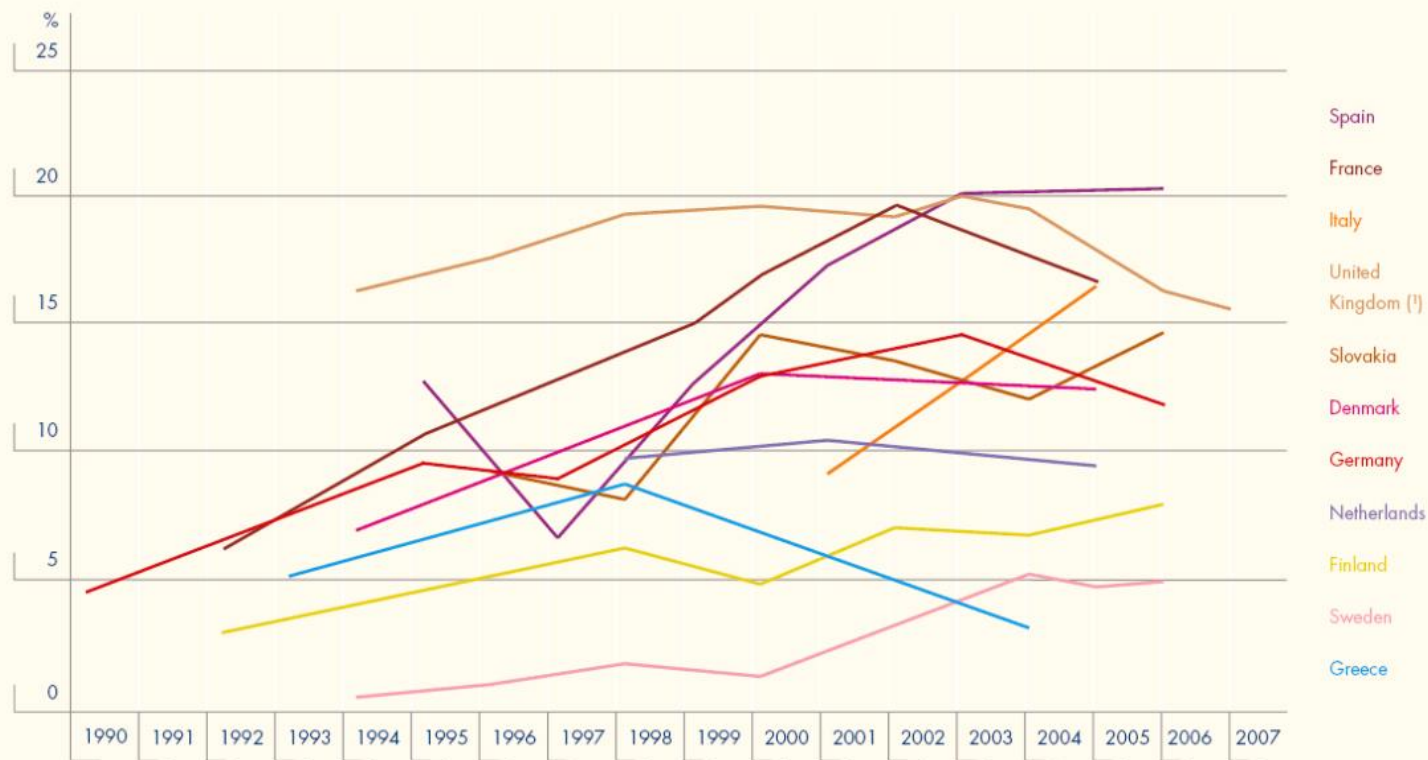

Lifetime use of marijuana or hashish by gender. 1995–2007. Percentages. Averages for 20 countries.

ESPAD data, n=100,000. 16 years of age, lifetime cannabis use

Europe: general pop surveys (last year use, 15-34 yr olds)

Figure 4: Trends in last year prevalence of cannabis use among young adults (aged 15–34)

(1) England and Wales.

NB: See Figure GPS-4 in the 2008 statistical bulletin for further information.

Sources: Reitox national reports (2007), taken from population surveys, reports or scientific articles.

Change in cannabis use (lifetime) 15-16 yr olds 1995- 2007

Squares above the line = increase
Squares below the line = decrease
Red squares = 4 % or more increase or decrease in the prevalence

UK: lifetime & past 30 day use, school students

ESPAD data, 17 year olds

USA: last year cannabis use, 17-18 yr olds

% Past year use

Australia: cannabis use in last year

Household survey (NDSHS) and school students survey (ASSAD)

Summary

- Mainly declining? Perhaps
- Australia has “led” the decline 1996/1998
- UK similar pattern
- Europe declines 2003 onwards
- USA – slower and lesser decline
- Depends on timeframe, data issues, which comparisons
- But WHY?

Why?

- Assuming we agree on a decline, why?...
- Mental health consequences more widespread
- Tipping point: bad press/deterrence
- Effective information, education, treatment availability
- Tobacco control
- Other drug substitution (alcohol, ecstasy)
- Cyclical epidemic trends
- Legal status...

International trends in cannabis policy

- Largely harmonising towards reduced penalties
- Largely focussed on use, not supply
- Difficult to categorise ...

Categorisation of regimes

- Full prohibition
- Prohibition with cautioning or diversion ('depenalisation')
- Prohibition with civil penalties ('decriminalisation')
- Partial prohibition, including:
 - a) '*De facto*' legalisation
 - b) '*De jure*' legalisation
- Medical marijuana control

Issues in categorisation

- Not “clean” categories: much heterogeneity
- “Law in books” vs “Law in action”
- Threshold amounts vary
- Countries vs states vs localities
- Discretionary police powers
- Arrest vs consequences after arrest

Categorisation....

[Depenalisation]	[Decriminalisation]	[Legalisation]	
Prohibition with cautioning or diversion A	Prohibition with civil penalties B	De facto legalisation (prohibition with expediency) C	De Jure Legalisation D
→ France	→ Belgium	→ Netherlands	→ Alaska (USA)
→ Australia NSW/VIC/QLD/TAS	→ Australia WA/ACT/SANT	→ Germany	→ Colombia
→ Canada	→ Italy	→ Austria	→ India
→ Britain	→ Czech Republic	→ Spain	→ ?Mexico
→ USA: 11 states	→ Portugal		
→ Brazil	→ Denmark		

Relationships between policy and outcomes ?

- Rates of use
- Price
- Rates of arrest

Lifetime use, among younger age groups, in 8 nations (ca. 2004)

Country (age range)		Lifetime	Last Year
USA (26-34)	A, E	56.7	19.9
Canada (25-34)	A	56.8	18.0
New Zealand (25-34)	A, B	62.0	18.0
France (15-34)	A	43.6	16.7
UK (15-34)	A	41.4	16.3
Netherlands (15-34)	C	32.3	9.5
Sweden (15-34)	E	19.1	4.8
Australia (20-29)		54.5	26.0

Source: A Report on Global Illicit Drug Markets 1998-2007.
(Various national household surveys)

Price of cannabis US dollars (ca. 2005)

Country		Price per gram
USA	A,E	12.30
Sweden	E	8.49
Canada	A	8.10
Germany	C	6.57
Italy	B	6.41
Switzerland	E	6.18
France	A	5.60
Netherlands	C	5.28
Spain	C	3.47
UK	A	3.36
Australia		15.26

Sources: EMCDDA, Caulkins et al. (2005).
A Report on Global Illicit Drug Markets 1998-2007

Cannabis arrest rates for 7 countries, ca. 2005

	Per 100,000 population	Per 1000 users*
Austria	333	44
Germany	237	34
US	269	31
France	225	26
UK	206	20
Netherlands	19	3
Australia	276	24

Source: The Global Cannabis Commission Report, September 2008

*Users: estimated number of past year users from most current household survey

Conclusions

- Cannabis use rates changing, largely falling, but highly variable
- Relationship between legal status and use unclear/absent

Questions?

- Why don't we care?
- Why is the policy discourse focussed on "use" not "supply"?
- Why are rates of cannabis use changing (and in different directions for different countries)
- What's important?
 - prevalence rates?
 - harms: health, criminal justice connection?
- Why is Australia an outlier?
